

Datasheet – 1101 Bracket ShoulderSink

1101 Bracket for ShoulderSink is an Iron bracket for mounting Shouldersink on a metal or wood surface e.g. in a car, van, lorry or other place where it is to be used.

The bracket is supplied without screws and other accessories as the mounting should be adjusted to the individual mounting surface and conditions. Please note that mounting in a car should be done with special consideration to the construction of the car – contact your mechanic or an authorized garage.

The strap is used for securing ShoulderSink to the bracket and will keep the ShoulderSink in place while driving. The strap should be placed in the center of the Bracket, and through the handle, as illustrated.
